

THE SPLENDOUR OF A HIGH GLOSS, GLASS-LIKE FINISH - 3D Transparent Edging

3D Transparent Edging is the outcome of Scanwolf's continuous pursuance in product innovation. Its impressive brilliance, unique spatial depth effect and stunning finish are all evidence of its prime quality. Classic 3D Transparent Edgings are extruded with smooth surfaces. However, a wide range of embossed ripple surfaces or textures are also available for individual preference. When used as a matching edge, 3D Transparent Edging joins surface to edge seamlessly. And as a contrasting edge, it assigns a distinctive character to furniture pieces, elevating their value and classiness.
